

Year 5 Rocket Scientists

The sky was the limit – well, almost – for budding designers and scientists in Year 5 when they got the chance to create and test their own space rockets.

The rockets, made from paper and decorated in class, were given a film cannister as an engine and a fuel of Alker Seltzer and water.

When the fuel was mixed, the carbon dioxide produced blasted the rockets up towards the ceiling of the old hall. Down on the benches in mission control, it was smiles and handshakes all around.
